Laperla is a very-early, high-yielding table potato with light yellow flesh and very attractive light yellow smooth skin. It is grown in the early potato production area's and mainly marketed straight from the field. Laperla especially convinces with its good drought tolerance and resistances against potato wart disease pathotype 1 and Ro 1 and a partial resistance against Pallida 2(6).

Plant

Maturity	Very early
Color of flower	Light red-violet
Foliage development	Medium
Number of tubers	Medium
Dormancy	Medium

Tuber characteristics

Tuber shape	Round oval
Flesh color	Light yellow
Eye depth	Shallow
Skin color	Light yellow
Skin characteristic	Smooth

Resistances

Nematodes	Ro 1
Potato wart disease	Race 1
Leaf blight	Medium
Tuber blight	High
Common scab	Medium
Internal rust spot	Medium, High
Second growth	High
Silver scurf	High
Bruising	Very high
PVY	Medium, High

Yield and Quality

Market outlet	Ware, Early ware, Pre-packing
Yield	Very high
Share oversize	High
Share undersize	Low
Cooking type	Firm cooking
After cooking discoloration	Very low
Dry matter content	Low
